

GROUND UP

Job Brief: Software Developer

Company Overview:

For professionals who want to make a tangible impact against the climate crisis while improving Indian agriculture, working with Ground Up offers a unique opportunity to be at the forefront of biochar innovation and carbon market development in India. Working with Ground Up means having a hands-on role in creating a greener future while being part of a team that helps transform agricultural waste into valuable resources.

Our mission is to put Biochar in the hands of every Indian farmer to jointly combat the issues of unsustainable biomass management and degraded Indian soils.

Position: Software Developer

Team: MRV

Location: Mumbai head office

Position Overview:

We are seeking an experienced **Software Developer** with strong expertise in **React.js, Node.js, and PostgreSQL**, along with a solid working understanding of **AWS cloud services**. The ideal candidate will have hands-on experience building full-stack web applications and, critically, a strong understanding of **SCADA (Supervisory Control and Data Acquisition) systems**, enabling them to work closely with field hardware, sensor data pipelines, and industrial monitoring systems as part of our MRV (Measurement, Reporting and Verification) platform.

Key Responsibilities:

- Design, develop, and maintain scalable full-stack applications using React.js on the frontend and Node.js on the backend.
- Design and manage relational data models and queries in PostgreSQL for application and MRV data.
- Integrate and manage data flows from SCADA systems and field sensors/devices into the software platform.
- Build and maintain APIs and services that connect field hardware, monitoring systems, and the core application.
- Utilise AWS services (EC2, S3, Lambda, RDS, DynamoDB, CloudFormation, etc.) for application hosting and infrastructure support.
- Manage deployment pipelines from development to production environments.
- Collaborate with cross-functional teams, including Operations, Carbon, and Product, to ensure smooth releases and reliable data pipelines.
- Monitor system and SCADA data performance post-deployment.
- Ensure security, scalability, and reliability of production systems.
- Troubleshoot and resolve issues across the application and field-data integration layers.
- Participate in code reviews, documentation, and continuous improvement initiatives.

Requirements:

- Bachelor's degree in Computer Science, Engineering, or related field (B.Tech/B.E./B.Sc.).
- Minimum 2-3 years of hands-on software development experience.
- Strong proficiency in React.js and Node.js; solid working knowledge of PostgreSQL.
- Best-in-class understanding of SCADA systems and experience integrating software with SCADA/industrial monitoring or sensor-based data systems.

- Good working understanding of AWS cloud services.
- Familiarity with CI/CD tools such as Jenkins, GitHub Actions, or GitLab CI is a plus.
- Strong problem-solving and debugging skills.
- Excellent communication and teamwork abilities.

Why Ground Up?

- Opportunity to work with a passionate and diverse team dedicated to sustainability.
- Opportunity to join an early-stage startup with opportunities for professional growth.
- Engage in cutting-edge projects at the intersection of agriculture and climate solutions.
- A collaborative and supportive work culture that values creativity and innovation.

How to Apply:

Interested candidates should send their resumes and cover letters detailing their relevant experience and explaining why they are interested in this position to shanay@ground-up.in. Please include “Software Developer Application - [Your Name]” in the subject line of the email.
